

To whom it may concern,

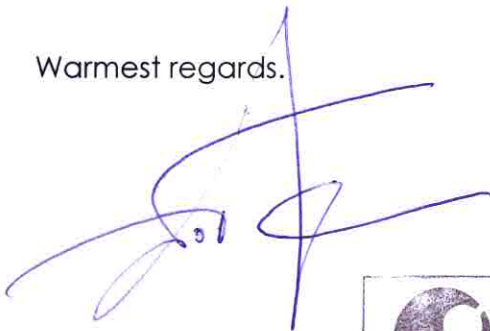

As the President SpikeNet Technology SAS company, I would like to express our great interest and enthusiasm in the Toulouse Mind and Brain Institute initiative, and we are happy to join as an industrial member in the team of top people from the scientific and education domain in Toulouse.

Rooted in the neurocomputing field since its birth, Spikenet company has been developing intelligent vision solutions since 1999 using a bio-inspired technology developed at the CNRS-CerCo based on spiking neuron networks.

For this reason, as an active company in the field of neuro computing with a regular technology and business watch, we believe that this new institute dedicated to Brain and Cognition can make a real difference in Europe and worldwide in the future, playing key role in the Artificial Intelligence field where massive investments are being made today by industry giants.

We hope that TMBI will be selected and we would like to give our strongest possible support for this project which has an enormous potential for promoting the cutting edge research in the Toulouse region.

Warmest regards.
